CHAPTER 1:- Properties of materials

1) The solids which have regular arrangement of atoms is called as.
a) Amorphous b) Crystalline c) Isotropic d) Semiconductor.
2) In BCC total number of atoms is
a) 4 b) 2 c) 1 d) 6
3) The ability of material to withstand stress without fracture is known as
a) Strength b) Stiffness c) Ductility d) Elasticity
4) The instrument used for microstructure observation is
a) Pyrometer b) Microscope c) Thermometer d) Watch
5) This is not an etching reagent.
a) Nitric acid b) Methyl alcohol c) Ethyl alcohol d) Brine Solution
6) Anything that has mass and occupies space
a) Metal b) Electron c) Neutron d) Ceramic
7) Metals are elements that can share maximum number of
a) Proton b) Electron c) Neutron d) Atom.
8) When two or more metals melted together known as
a) Metals b) Nonmetals c) Polymer d) Alloys
9) The substance which is in without form
a) Amorphous b) Crystalline c) Ferrous d) Non ferrous
10) Glass is an example of
a) Amorphous b) Crystalline c) Base metal d) Non ferrous
11) In a simple cubic structure total number of atoms is
a) 4 b) 3 c) 2 d) 1
12) In HCP structure total number of atoms is
a) 4 b) 3 c) 6 d) 8
13) In FCC structure total number of atoms is

a) 4 b) 3 c) 4 d) 8
14) Elasticity is Property of material.
a) Mechanical b) Electrical c) Physical d) Chemical
15) The weight per unit volume is called as
a) Density b) Sp. Wt. c) Sp. Gr. D) Sp. Vol.
16) The ability of material to withstand scratch, wear, abrasive resistance is known as
a) Toughness b) Hardness c) Fatigue d) Elasticity.
17) The slow and progressive deformation with time and at constant stress and temperature is
a) Fatigue b) Hardness c) Brittleness d) Elasticity.
18) This is not a etching substance.
a) Alumina b) Brass c) Nickel d) Bronze.
19) Brinell hardness is conducted as per
a) ASTM b) ASME c) ISI d) ISO
20) Normally diameter of indentor in hardness test is taken in mm
a) 10 b) 5 c) 15 d) 20
21) The time for Brinell hardness test is in sec
a) 15 b) 10 c) 12 d) 5
22) The atomic packing factor for SCS is
a) 0.52 b) 1 c) 1.2 d) 0.1
23) The atomic packing factor for BCC is
a) 0.52 b) 0.62 c) 1.2 d) 0.1
24) The atomic packing factor for FCC is
a) 0.52 b) 1 c) 1.2 d) 0.74
25) The atomic packing factor for HCP is
a) 0.52 b) 1 c) 0.74 d) 0.1

CHAPTER 2 EQULLIBRIUM DIAGRAMS

26) Solid solution of metal starts with (CO2)
a) Nuclei b) Proton c) Electron d) Neutron
27) Melting point of aluminum is in Degree Celsius. (CO2)
a) 760 b) 860 c) 960 d) 660
28) The austenite phase structure has structure. (CO2)
a) FCC b) BCC c) HCS d) HCP
29) The Curie temperature is in Degree Celsius. (CO2)
a) 768 b) 210 c) 1147 d) 1400
30) Completion of cementite to austenite occurs at temperature (CO2)
a) A4 b) Acm c) A2 d) A3
31) Carbon % s in eutectoid steel is (CO2)
a) $< 0.8\%$ b) $> 0.8\%$ c) 2% d) 0%
32) Steel is alloy of (CO2)
a) Iron & Carbide b) Iron & Copper c) Iron & Carbon d) Graphite & Carbon
33) A cold Chisel is made from (CO2)
a) M.S. b) C.I. c) H.S.S. d) H.C.S.
34) Hot work tool steel is designated by series. (CO2)
a) W b) O c) A d) H
35) The substance which is dissolved is known as
a) Solute b) Solvent c) Substance d) Mixture
36) A homogeneous, physically distinct and mechanically separable is
a) Substance b) Solvent c) Solute d) Phase.
37) The substance which is in purest form is
a) Alloy b) Pure metal c) Nonmetal d) Phase

a) Constant b) Change c) Increase d) Decrease
39) In regular solid solution solutes and solvent are
a) Equal b) Less c) More d) All of above
40) Solidification of alloy starts with
a) Constant temp. b) Change in temp. c) Increase in temp. d) All of above
41) A pure metal consists of elements
a) 2 b) 1 c) 3 d) 4
42) Copper and aluminum are examples of
a) Nonferrous metals b) Ferrous metals c) Both a and b d) None of above
43) PVC is example of
a) Rubber b) Thermosetting plastic c) Thermoplastic d) All of above.
44) Sand and Bricks are
a) Composite b) Polymer c) Metal d) Ceramics.
45) Zinc and lead and tin are example of
a) High M.P. b) Low M.P. c) No M.P. d) None of Above.
46) Which one of the harder material from following.
a) Diamond b) Steel c) Titanium d) Tungsten
47) An alloy is having Structure.
a) Homogeneous b) Heterogeneous c) Intermetallic d) All of above
48) Which of the following alloy used for making surgical instruments
a) Steel b) Brass c) bronze d) C.I.
49) Cutting tools are made from
a) HSS b) Medium carbon steel c) HCS d) Copper
50) The α ferrite has Structure
a) BCC b) FCC c) SCS d) HCP
51) The α ferrite stage form at°C.

a) 210 b) 768 c) 1500 d) 727
52) Austenite Phase having Structure.
a) FCC b) BCC c) HCP d) SCS
53) The austenite phase forms at temperature at°C.
a) 210 b) 1147 c) 1500 d) 1600
54) The Delta ferrite stage forms at°C.
a) 210 b) 1147 c) 1500 d) 1600
55) Fe3C (Cementite) forms at°C.
a) 210 b) 1147 c) 1500 d) 1600
56) The last stage obtained after heat treatment is
a) Pearlite b) ferrite c) bainite d) austenite
57) Cementite becomes paramagnetic at°C.
a) 210 b) 768 c) 1500 d) 727
58) Pearlite turns into austenite at°C.
a) 210 b) 768 c) 1500 d) 727
59) Peritectic reaction occurs at°C.
a) 1498 b) 768 c) 1500 d) 727
60) Eutectoid reaction occurs at°C.
a) 1498 b) 768 c) 1500 d) 727
61) Eutectic reaction occurs at°C.
a) 1498 b) 1148 c) 1500 d) 727
62) Carbon content in Hypoetectiod steel is
a) 0.8% b) Between 0.8-2% c) less than 0.8% d) 6.67%
63) Carbon content in Hypereutectoid steel is
a) 6.67% b) Between 0.8-2% c) less than 0.8% d) 0.8%
64) The steel is usually consists of chromium up to.

a) 18% b) 4% c) 50% d) 10%
65) High speed tool steel maintains high hardness up to temperature of
a) 500°C b) 550°C c) 600°C d) 650°C
66) Steel has 1.5% carbon and 12% Chromium.
a) OHNS B) HCHC c) HSS d) SS
67) Which steel has high dimensional stability?
a)HCHC b) HSS c) Hot work tool Steel d) cold work tool steel
68) M - series HSS steel contains high amount of
a) Molybdenum b) Tungsten c) Nickel d) Chromium
69) T- series HSS steel contains high amount of
a) Molybdenum b) Tungsten c) Nickel d) Chromium
70) Addition of silicon in steel
a) Increase T.S. b) Act as deoxidizer c) Decrease T.S. d) Abrasion resistance.
71) To increase hardness which alloying element is added?
a) Tungsten b) Manganese c) Carbon d) All of above
72) is used for metal cutting
a) Low carbon steel b) medium carbon steel c) High carbon steel d) superheated steel
73) An engineering hammer is example of
a) C.I. b) M.S. c) Forged steel d) High carbon steel
74) First alloy made by human being is
a) Steel b) Brass c) Bronze d) M.S.
75) Compressive strength is highest in case of
a) C.I. b) M.S. c) Carbon Steel d) High carbon steel.
76) Bronze is alloy of
a) Cu & Ni b) Cu & Fe c) Cu & Tin d) Cu & Al
77) Brass is an alloy of

a) Cu & Ni b) Cu d	& Fe c) Cu & zinc d)	Cu & Al			
78) The solid solution of i	ron is called as				
a) Ferrite b) Auste	enite c) Cementite d) Ba	ninite			
79) Red hardness of alloy	steel can be improved by a	dding			
a) Vanadium b) M	Janganese c) Titanium	d) Tungsten			
80) The melting point of M	M.S. is				
a) 5000°C b) 15	500 °C c) 2000°C d) 2	00°C			
	CHAPTER 3 C	CAST IRON			
81) The gray cast iron has	s				
a) High melting poin	t	b) High thermal conductivity			
c) Lower compressiv	e strength	d) All o	d) All of the above		
82) The % of carbon in g	ray cast iron is in the range	of			
a) 0.25 to 0.75%	b) 1.25 to 1.75%	c)3 to 4%	d) 8 to 10%		
83) Malleable cast iron is	produced				
a) by adding magnesi	um to molten cast iron	b) by quick coo	oling of molten cast iron		
c) From white cast ire	on by annealing process	d) none of thes	e		
84) Which of the following impurity in cast iron make it hard and brittle?					
a) Silicon	b) Sulphur	c) Manganese	d) Phosphorus		
85) Cast iron has	-				
a) High tensile strength		b) High ductility			
c) Elastic limit close to ultimate breaking strength		d) None of the above			
86) Malleable cats iron is more than gray cast iron					
a) Strong	b) Hardness	c) Ductile	d) All of the above		
87) Annealing of white ca	st iron results in production	ı of			

a) Ductile cast iron	b) Spheroidal cast iron	c)Gray cast iron	d) Malleable cast iron
88) White cast iron is also	known as		
a)Chilled cast iron	b) Nodular cast iron	c) Malleable cast iron	d) None of the above
89) Machine tools beds ar	re made from		
a) White cast iron	b) Spheroidal cast iron	c) Gray cast iron	d) Malleable cast iron
90) Carbon content in wh	ite cast iron generally vari	es from	
a)2 to 3.6%	b) 1.5 to 2%	c) More than 4%	d) None of the above
91) Carbon content in gra	ny cast iron generally varie	s from	
a) 1.2 to 2.0%	b) 2.5 to 3.8%	c) 4 to 6.67%	d) None of the above
92) Annealing of white ca	st iron results in productio	n of	
a)Ductile cast iron	b)Spheroidal cast iron	c)Gray cast iron	d) Malleable cast iron
93) Carbon content in gra	ny cast iron generally varies	s from	
a) 1.2 to 2.0%	b) 2.5 to 3.8%	c) 4 to 6.67%	d) None of the above
94) Carbon content in wh	ite cast iron generally vari	es from	
a)2 to 3.6%	b) 1.5 to 2%	c) More than 4%	d) None of the above
95) Which of the followin	g impurity in cast iron mak	ke it hard and brittle?	
a) Silicon	b) Sulphur	c) Manganese	d) Phosphorus
96) Cast iron is produced	in		
a) Blast furnace	b) Box furnace	c)Muffle furnace	d) Cupola furance
97) The product of refine	ment process in cupola is		
a) Stainless steel	b) Tools steel	c) Cast iron	d) Pig iron
98) Red hardness of an al	loy steel can be improved b	oy adding	
a) Vanadium	b) Manganese	c) Titanium	d) Tungsten
